**Period for Reply** -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 31 January 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Utility Model Number 54-85404 (Norio et al). Norio et al discloses a stator for an electromagnetic pump comprising: a cylinder (Figure 1 and 2) whose both end faces are respectively closed by a pair of frames (Figure 1 and 2); a movable member (3) having a magnetic body (4), said movable member (3) being accommodated in said cylinder and capable of reciprocally moving in the axial direction thereof (Figure 2); pump chambers (Figure 1 and 2) being respectively formed between inner faces of the frames and both side faces of said moving member (3) extended in the moving direction thereof; and an air-core electromagnetic coil (2) being fitted around periphery of said cylinder (Figure 1 and 2), characterized in, that axial end faces of said electromagnetic coil are provided with yokes (1) made of a magnetic material; wherein a plurality of said air-core electromagnetic coils (2) are fitted around the periphery of said cylinder (Figure 1 and 2), and the axial end faces of each of said electromagnetic coils are provided with the yokes (1) made of the magnetic material; wherein a plurality of said air-core electromagnetic coils (2) are fitted

Art Unit: 3746

around the periphery of said cylinder (Figure 1 and 2), and the yokes (1) of each of said electromagnetic coils (2) are extended toward an inner face of each of said electromagnetic coils (2), which faces a magnetic flux working surface of said moving member (Figure 2).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Utility Model Number 54-85404 (Norio et al) in view of Japanese Utility Model Number 58-28468 (Goshi et al).

Art Unit: 3746

Norio et al discloses a stator for an electromagnetic pump. Norio et al does not disclose a stator for an electromagnetic pump wherein a spacer made of a nonmagnetic material or an air space is provided between the yokes of said adjacent electromagnetic coils. Goshi et al discloses a stator for an electromagnetic pump wherein a spacer (11 and 13) made of a nonmagnetic material or an air space is provided between the yokes of said adjacent electromagnetic coils. It would have been obvious to one of ordinary skill in the art at the time of invention to modify Norio et al's stator for an electromagnetic pump in view of Goshi et al to provide a spacer for connecting the yoke and provide stable quality and function.
